

EMERGENCYFLOW AI

Clear the way for ambulances.
Safely.

7-10%

A cardiac arrest patient's chance of survival falls 7-10% for every minute without CPR or defibrillation.

- A red light can mean a lost minute.
- Forcing every light green can cause a crash.
- We tested 560 simulations to prove you can have speed and safety.

"Every minute at a red light costs a life. We fix that without making roads unsafe."

THE PROBLEM : Ambulances lose precious time at traffic signals

Number	What it means
25–30 min	Average ambulance response time in Indian cities
62%	Ambulance drivers who say other motorists don't give way
Under 20%	Urban traffic signals that can support modern priority systems

Today, getting a green light for an ambulance depends on a police officer being at the right place at the right time. That does not scale.

- The three bad choices:-
- **Do nothing:** the ambulance waits at red, so time is lost.
 - **Force green blindly:** the ambulance is faster, but crossing traffic is at risk.
 - **Fixed route:** the best route 30 seconds ago may be slow now.

What's missing: a system that keeps asking "When should we step in, and is it safe?"

OUR SOLUTION : A smart system that gives ambulances a safe green light

CITY → BRAIN → SAFETY SHIELD → SIGNAL → AMBULANCE

ONE TRIP, STEP BY STEP

Honest note

Version 1 uses clear rules, not machine learning. That makes every decision explainable, which matters for public safety.

The AI suggests. The safety checker decides.

THE DIFFERENTIATOR : **We give a safe green light!**

WE DON'T JUST GIVE A GREEN LIGHT. 3 HARD RULES, **0 EXCEPTIONS**

No conflicts
No conflicting greens.

Clearance
Green → Yellow → Red with
minimum clearance.

Priority last
Priority only after conflicting
movements have been red for
the required clearance.

Fail-safe

Decision engine fails → junction recovers → normal signal
program resumes

Independent monitor

0 signal violations

0 collisions

71%

fewer emergency vehicle crashes after preemption in St. Paul, MN. Priority done right improves safety.
Source: FHWA report (fhwahop24019)

Safety is not an output. **Safety is a constraint.**

THE PROOF IT WORKS:

EmergencyFlow cuts ambulance travel time **nearly in half**

NORMAL LIGHTS

92 sec

3 STOPS

WITH EMERGENCYFLOW

47.5 sec

0 STOPS

48% FASTER

Same route • 3 stops → 0 stops

REAL-WORLD VALIDATION

14–23%

reduction in emergency
response time

Denver study

SYSTEM SPEED

<12 ms

decision/response latency

vs 100 ms target

SAFETY

0

collisions in simulation

3 stops → 0 stops

WHY THIS CAN BECOME BIGGER

From one ambulance to an emergency mobility platform

TODAY

Simulated city, 1 ambulance,
safe preemption, 3D
monitoring

NEXT

Dynamic routing, COORD
mode, incident rerouting

FUTURE

Fire, police and fleets, then
city traffic systems

The numbers that justify “Next”

31%

Adaptive corridor preemption cut emergency travel time by 31% versus no preemption, and by 13% versus single-intersection preemption.

UP TO 62.85%

A 25-intersection simulation study found that intelligent control can cut emergency travel time by up to 62.85%.

BUSINESS OPPORTUNITY

A growing market with a real gap in India

₹6,800–11,600 cr

Global emergency vehicle priority market in 2026, growing about 6–8% a year

₹11,600 → ₹21,200 cr

One report projects this rise from 2026 to 2034

~35%

Asia Pacific is the largest region, at about 35% of the market

Why we have an opening

- Under 20% of Indian urban signals are ready for modern systems, so most cities can't just plug in existing products.
- Priority today is often manual and inconsistent.
- A software-first, test-before-you-deploy approach suits cities with limited budgets.

Who buys, and what they get

City traffic police
and municipalities

Faster response, fewer ambulance
crashes, data to prove it

Ambulance
operators

Shorter trips

Hospitals

Patients arrive sooner

How we earn (proposed plan)

- 1 Free or low-cost simulation pilot on a city's real corridor, no hardware needed
- 2 Yearly software license per city or per junction
- 3 Add-ons: integration, analytics dashboards, training

Why we win

- Safety is proven and independently checked
- It works software-first
- Decisions are explainable and auditable
